### Computer Science Phonebook

I plan on making my final project a phonebook for students to use that is categorized by what class they are in, what classes they have taken, and whether or not you may contact them regarding questions. Hopefully, with this program Marist college can help the community of Computer Science majors help each other through the use of teamwork. In addition, this may help blend the relationship between lower and upperclassmen. This application will need to access the Marist Computer Science database and the individuals per grade. Instead of gaining access to degree works to learn the classes taken, I plan on just having the normal classes taken for freshman and sophomores. The app will produce a chart of students in your grade with the student names going down and the classes likely for a student to take that year. If there is a check next to the student, under the column of the class. That student is either in the class currently, or has already completed it. This will encourage study groups and a better learning environment for the incoming freshman with no friends and no resources for help.
